Summary

Information Technology student with hands-on experience building practical web applications and working across development, cloud technologies, databases and data visualisation. Comfortable learning new tools and technologies through hands-on projects, with experience using Python, JavaScript, React, Flask, AWS and Power BI. A curious and adaptable learner seeking an internship to contribute to real-world projects, build on my technical skills and gain industry experience.

PROJECTS

SCCCI Support Ticket Dashboard | Full-Stack Development

- Developed a full-stack application to support SCCCI's event and delegate operations.
- Built a dashboard covering support tickets and system diagnostics.
- Added facial-recognition functionality for delegate identification.

Peer Tutoring Platform | UI/UX & Frontend Development

- Designed the student-facing experience for finding tutors, managing availability and requesting sessions.
- Created the main UI and user flows in Figma and brought them into the React frontend.

Chin Hon Motors Website & Pricing Console | Python / Flask

- Built a Python/Flask web application with a pricing console for Chin Hon Motors.
- Added tools to compare pricing information and flag potential underpricing or overpricing.
- Structured the application with Flask routes, database operations and role-based views.

Education Cost vs Quality Dashboard | Power BI / Data Analytics

- Built an interactive Power BI dashboard exploring education spending and academic outcomes across countries.
- Cleaned and prepared the data using Power Query and created DAX measures for analysis.
- Used KPI cards, scatter plots and filters to explore trends and differences between countries.

LEADERSHIP & ENRICHMENT

SIT Club EXCO — Nanyang Polytechnic

- Supported planning and execution of EAE Festival and Camp Eureka, coordinating teams and event operations.

Participant — NYP x AWS Hackathon

- Collaborated in a team to develop and present a solution within a time-constrained challenge.
